Honda extends the Power Window Switch replacement to 72,115 units of City in India

New Delhi, 5 Sept 2011: Honda Siel Cars India Ltd. today announced that it would carry out preventive part replacement of Power Window Switch in 72,115 units of 2nd Generation City, manufactured in 2005 to 2007.

HSCI had announced this proactive part replacement exercise in Jan' 2010 for 8532 units of 2nd Generation City, manufactured in 2007. Although no incident has been reported in India, HSCI is extending the same exercise to the previously sold Honda City manufactured in 2005 to 2007.

HSCI is carrying out the part replacement as part of a global exercise by Honda Motor Company to ensure stringent quality standards for its products.

The replacement would be carried out free of cost and the owners will be contacted to carry out the exercise smoothly.

The 3rd Generation City, currently sold in India, is not affected and does not require any part replacement. HSCI further clarified that the global recall does not impact the Honda Jazz and Honda CR-V sold in India.
